Git, GitHub, VSCode, Slack, Figma, Azure, Vercel

Applications Developed

Weather Report GitHub ⌘ | Live ⌘

A dynamic HTML, CSS, and JavaScript solo project which allows users to view the weather as well as additional forecast and allows users to add or delete a location.

- Created and designed **wireframes** for the webpage using **figma**
- Built a layout for both mobile and desktop using **HTML**
- Utilized **CSS** to style the web-page to replicate the **figma wireframe** for both desktop and mobile
- Utilized **JavaScript** to create to create reusable functions that pulls information from a weather **API,** Renders a **DOM Tree** using the values of the **API** and **appends** it to an entry list
- Initialized a **JavaScript** function which stores the users input in the local storage using **JSON**

LSP GitHub ⌘ | Live ⌘

A dynamic React Js, Bootstrap and PostgreSQL application for an audience seeking a media application to store their favorite songs and take and store selfies taken.

- Built the web-page's layout as well as the form for the user's input utilizing **HTML** and **React Js**
- Replicated the **figma** wireframe utilizing **Bootstrap** to create a dynamic webpage for both mobile and desktop
- Utilized **React Js** to create components that allow users to store an image taken and song to a **PostgreSQL** database, allow users to view entries with a **JSX function**
- Created a **JavaScript** function allowing users to manipulate an entry by using **PostgreSQL expressions**
- Created a separate **JavaScript** file to handle file upload middleware with the **NPM** package **Multer**

Professional Experience
